

Data Communication Agent

connect update sync

Transportation route planning is only as good as the data it contains. Use BusPlanner[®] *Live* to ensure your data is up-to-date. BusPlanner[®] *Live* links your BusPlanner[®] Transportation Management System to

any student information system to provide the most accurate, up-to-date information possible. Achieve greater efficiency by replacing older batch-style student imports with live updates from your student system.

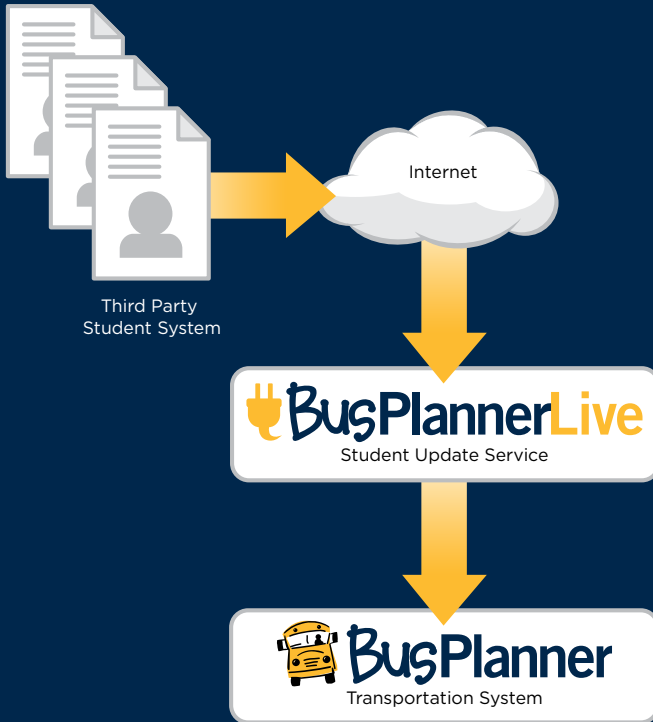

BusPlanner[®] *Live* will reduce your workload, save your time, and make your routing solutions more effective.

.....

Whether you manage transportation for 1,000 or 100,000 students, BusPlanner[®] *Live* can help!

- Live student information update service
- Transportation data sharing portal
- Flexible data processing options
- Secure data transfer via web services
- For use with any Student Information System

How Does It Work?

BusPlanner® Live is part of the **BusPlanner®** Suite. This web services-based product offers a live connection between unrelated data applications that would otherwise require manual batch processes to maintain synchronization. **BusPlanner® Live** can be used in conjunction with many student information systems – regardless of SIF compliance – to accept student information as well as provide and share transportation data.

georef  **efficiency through innovation**
