#### **Redistricting & Boundary Analysis**

# plot calculate redistrict

To redistrict effectively, you need to visualize your boundaries. BusPlanner *Districts* provides boundary and population analysis features that illuminate the demographics within your transportation database. BusPlanner 's redistricting module allows you to display and summarize information based on any student

data fields. BusPlanner *Districts* advanced boundary management tools allow you to efficiently achieve an optimal boundary solution.

#### BusPlanner Districts helps you with:

- · School boundary optimization
- · Student demographic analysis
- · Advanced boundary editing and management
- · School capacity analysis

#### **How Does It Work?**

BusPlanner Districts helps administrators understand – and respond to – regional demographic changes through a series of statistical analysis tools. Multi-layered search functionality means that you'll always get the data you're looking for. Easy-to-read results make extracting and communicating information fast and simple. BusPlanner Districts is a module that can be easily integrated with BusPlanner Pro or BusPlanner Maps.

### Helping You Visualize Your Solution >

Your imagination is endless with BusPlanner Districts. With several boundary optimization tools available to you, you can test your ideas over and over again before deciding on the solution that is right for you. Managing school attendance boundaries for your entire district can be time-consuming and overwhelming. BusPlanner Districts provides advanced boundary editing tools that make it easy to create, copy, edit, split, and merge boundaries – making redistricting easier than ever.

## Powerful Demographic Analysis >

The demographic analysis tools in BusPlanner Districts are powerful, easy to use, and provide all the information you need for the redistricting process. This integration allows for the easy overlay of your transportation database all within the same application.
